

HUMAN PAPILLOMAVIRUS (HPV)

There are over 150 different strains of the HPV virus. It is most commonly spread through intimate, skin-to-skin contact. HPV is extremely common with 80% of the population contracting the virus at some point in their lives.

According to the CDC's website, "In most cases, HPV goes away on its own and does not cause any health problems." (1) However, sometimes HPV can lead to genital warts or in rare cases, certain types of cancer.

The HPV vaccine is one of the most dangerous vaccines on the market and should be removed immediately. The insert can be found [HERE](#) *PDF*

Some of the adverse reactions listed on the insert are as follows:

- *Systemic autoimmune disorders
- *Idiopathic thrombocytopenic purpura, lymphadenopathy
- *Pulmonary embolus (blood clot; can be fatal)
- *Pancreatitis
- *ADEM (look it up)
- *Guillain-Barré syndrome
- *Motor neuron disease
- *Paralysis
- *Seizures
- *Deep venous thrombosis
- *Death

Additionally, here are some tidbits of information taken straight from the vaccine's website. (2)

“Vaccination with GARDASIL 9 may not result in protection in all vaccine recipients.”

“GARDASIL 9 has not been demonstrated to provide protection against diseases from vaccine HPV types to which a person has previously been exposed through sexual activity.”

“Not all vulvar, vaginal, and anal cancers are caused by HPV, and GARDASIL 9 protects only against those vulvar, vaginal, and anal cancers caused by HPV Types 16, 18, 31, 33, 45, 52, and 58.”

“The duration of immunity of GARDASIL 9 has not been established.”

The researcher Neil Z. Miller hit it home when he wrote about the HPV vaccine in his book *Miller's Review of Vaccine Studies: 400 Important Scientific Papers Summarized for Parents and Researchers*.

“Young teenage girls have no risk of dying from cervical cancer but they gamble with permanently disabling autoimmune or degenerative disorders, or death, following their HPV vaccines. In fact, the HPV vaccine may enhance cervical disease in young women with pre-existing HPV infections. In addition, the vaccine is unlikely to significantly reduce already low cervical cancer rates in countries with routine Pap screening.”

MOMSPEAK

If you are debating whether or not to get the HPV vaccine for your son or daughter, PLEASE buy and read this book before you make that critical decision!

https://www.amazon.com/HPV-Vaccine-Trial-Generation-Betrayed/dp/1510710809/ref=sr_1_fkmrnull_1?crd=1H8J5YQK3FUD7&keywords=the+hpv+vaccine+on+trial&qid=1553875206&s=gateway&srefix=the+hpv+vaccine+on+trial%2Caps%2C163&sr=8-1-fkmrnull

Here are some key points to remember:

1) The HPV vaccine has never prevented a single case of cervical cancer.

What?? But that's what we hear right? That's what Merck has spent millions of dollars in advertising to tell the public; their vaccine prevents cervical cancer.

Well, it's false advertising.

In order to prove that claim, Merck would've needed to study the vaccine for decades because the median age for diagnosis of cervical cancer is 50.

What the clinical trials did do, was test the vaccine against a "surrogate endpoint". These were abnormal cervical lesions - NOT CANCER. This allowed the vaccine to be "fast-tracked" and added to the pediatric schedule prematurely. This is why we

can safely say that the HPV vaccine has never been shown to have prevented a single case of cervical cancer.

It is important to note that Dr. Julie Gerberding was head of the CDC during the development of the HPV vaccine. She enabled the vaccine to reach the market, then left the CDC to become president of Merck's vaccine division one year later. Talk about corruption.

2) Not only does the HPV vaccine fail to prevent cervical cancer, it can actually increase your risk of developing cancer if you have a pre-existing HPV infection!

You read that right.

If an individual already has HPV in their system, clinical trials have shown the vaccine increases the risk of developing precancerous lesions by up to 44%!

Do doctors pre-screen their patients before administering the HPV vaccine?

No, and that is horrifying.

3) Merck is currently involved in several lawsuits with entire COUNTRIES over the fraud, wrongful death, and lack of informed consent that occurred in scandalous observational trials. They have paid out billions of dollars in settlements in regard to false advertising, bribery, labor disputes, and environmental violations as well as injury and death.

This vaccine manufacturer has no conscience.

4) Even though the vaccine has only been on the market since 2006, the U.S. government has already paid out millions in compensation for serious injury and death from the HPV vaccine.

I truly hope that these facts encourage you to research this ineffective and dangerous vaccine more thoroughly.

Your child's life depends on it.
